

Our strategy: Scale is built on our own core framework — a proven enterprise foundation, extended with our own purpose-built apps — rather than building bespoke software from the ground up for every client. Every client organization has a different org chart and different job titles, so instead of customizing the software per client, we are standardizing on **nine generic seniority tiers**, each with its own purpose-built dashboard. Onboarding a new client becomes a one-time mapping exercise — matching that client's own job titles onto these nine tiers — not new software. The table below shows this worked out in full for Project Management, our first module; the same approach extends next to HR and every other Scale module.

TIER & DASHBOARD	TYPICAL CLIENT JOB TITLES	WHAT THEY SEE	WHAT THEY CAN APPROVE
1 Executive "My Work" hub LIVE	<i>Developer, Site Engineer, QA Engineer, Design Engineer, Technician, Associate</i>	Their own assigned Tasks across every Project (status, priority, due date — updated inline); a weekly Timesheet grid to log hours; a quick way to raise a Material Request for their Project. Nothing beyond their own work.	Nothing — requester only
2 Senior Executive "My Team" hub PLANNED	<i>Senior Developer, Site Supervisor, Team Lead, Senior Engineer, Shift Supervisor</i>	Everything Tier 1 sees for themselves, plus a live view of their direct reports' Tasks and Timesheets — who's overloaded, whose hours are missing, what's overdue — using each employee's own manager already recorded in their profile. Nothing outside their own small team.	Team's Timesheets & Material Requests
3 Assistant Manager "My Team" hub, widened PLANNED	<i>Assistant Manager, Deputy Manager, Project Coordinator</i>	Same view as Tier 2, but rolled up across every Supervisor's team that reports up to them — several teams side-by-side, not just one.	Same categories, wider scope
4 Manager "My Projects" portfolio LIVE	<i>Project Manager, Site Manager, Delivery Manager, Engineering Manager</i>	A live, colour-coded (red/amber/green) health status for every Project they run — calculated automatically from real task delays, not self-reported — alongside start/end dates, % complete, and open/overdue task counts per Project. A dedicated Approvals tile surfaces Budget sign-offs, Change Requests, and Timesheet reviews waiting on them, scoped to only the Projects they personally manage. <i>This view already works well today — no gap found; nothing further needed at this tier.</i>	Project Budget, Change Requests, Timesheet review
5 Senior Manager Portfolio, rolled up PLANNED	<i>Senior Manager, Program Manager, Regional Manager</i>	The same portfolio view as Tier 4, consolidated across every Manager and Project within one function — a "manager of managers" summary rather than one more single-project list.	Higher-value approvals
6 AVP Cross-department view PLANNED	<i>AVP, Associate Director, Deputy GM, Head of Delivery</i>	Health, budget, and delivery trend compared side-by-side across every department under them — spotting which department needs attention without opening each one.	Value-threshold approvals
7 VP Executive Dashboard LIVE (broadened)	<i>VP, Director, General Manager, Head of Operations</i>	Company-wide operational numbers for every department at a glance, plus an escalation queue for issues that couldn't be resolved lower down. A working, decision-making view — not just a report.	Escalations
8 President / C-Suite Executive Dashboard, trimmed PLANNED	<i>President, CEO, COO, CFO, CTO, Managing Director</i>	Company-wide strategic summary only — revenue, delivery health, and risk at a glance. Deliberately no task-level or project-level detail to click into — built by simplifying the Manager/VP views down, not adding anything new.	Strategic sign-off only
9 Board of Directors Governance scorecard PLANNED	<i>Board Members, Promoters, Chairman</i>	The lightest view in the system — a quarterly, portfolio-level scorecard for board meetings. No day-to-day operational access at all; likely a simpler, read-only login rather than the full system.	None operational

Job titles above are illustrative examples, not a fixed list — at client onboarding, we map that client's actual job titles onto these nine tiers once. Tiers 1 and 4 are already built and live today; the rest are the next phase of this same framework.
